Investing in Climate Change Resilience

- (1) Making the Business Case for Investment
- (2) The Role of the Insurance Sector in Incentivizing Action

12 noon – 1.30 pm (CET)
7 January 2025

In 2024, PIANC's Permanent Task Group on Climate Change published Technical Note No.2 **Climate Change Costs to Ports and Waterways: Scoping the Business Case Assessment for Investment in Adaptation**.

Technical Note No.2 is a supplement to PIANC's Working Group 178 guidance on Adaptation Planning for Ports and Inland Waterways. The Note aims to address one of the main potential barriers to climate change adaptation action: how to justify the required investment. It provides an insight into issues should be considered in scoping the business case, and enables the preparation of a bespoke investment argument.

The first presentation in this webinar will introduce Technical Note No.2, focusing on understanding the consequences and costs of climate change inaction. It will also highlight how sectors such as finance and insurance, can influence adaptation decision-making. **Jan Brooke**, Chair of PIANC's Permanent Task Group on Climate Change will present Technical Note No.2.

The second presentation will take a deep-dive into the role of the insurance sector in incentivising action to strengthen resilience and adapt port and waterways to the changing climate. This presentation will be made by **Neil Dalus**, Risk Assessment Manager at TT Club, the world's leading transport and logistics insurer.

These two presentations will be followed by a panel discussion and Q&A session, where Jan and Neil will be joined by **Aaron Healy**, an underwriter at TT Club who specialises in ports and terminals, transport, logistics and container risks.
